

## Fixed Issues in DataShop v5.3.8 as of May 11, 2012

| Issue ID | Priority | Summary   |
|----------|----------|---|
| DS1352   | Urgent   | Agg: using non-start events to determine the problem view/start time in tx export                           |
| DS1364   | Urgent   | Web-iso account creation  |
| DS1351   | High     | Changed LFA to AFM during the KC Model Import   |
| DS1355   | High     | WebServices: Data provider should be included in GetDataset   |
| DS1357   | High     | WebServices: Data provider should be included in schema   |
| DS1358   | High     | KCM: Dataset Info page displays after deleting a KCM on LC > KC Models page                                 |
| DS1363   | High     | Web browsers use cached versions of CSS and JS files instead of getting the latest when we release DataShop |
| DS1368   | High     | LogLoader: include server_receipt_time in the oli_log table to make archiving data easier                   |
| DS1369   | High     | Registration: new account creation fails for WebISO user  |
| DS1379   | High     | Dataset Info-KC Models: error for datasets with no data.  |
| DS1380   | High     | XML Validator give a hint to use CDATA if there is HTML in the content of an element                        |
| DS1390   | High     | Tx Export: columns misaligned if one row has 0 inputs and another has 2 or more                             |
| DS1365   | Medium   | Page grid controls overlap IE export tip  |
| DS1366   | Medium   | Terms: Contextual help window should not appear if loading page for the first time                          |
| DS1367   | Medium   | Help window appears with no content and JS error when no cookies are set                                    |
