

Fixed Issues in DataShop v5.1.12 as of October 7, 2011

| Issue ID | Priority | Summary |
|----------|----------|--|
| DS1289 | Urgent | FFI: feedback text column max length limited to 255 characters instead of TEXT datatype. |
| DS1323 | Urgent | Web Services: Step Rollup - truncation of headings and skill names due to group_concat_max_len |
| DS1194 | High | Tx Export: export file status wrong for a new cached sample after KCM imported |
| DS1230 | High | Tx Export: incorrect sample created when two different users created different samples in same dataset |
| DS1285 | High | Feature: Add Problem View and Problem Start Time columns to Tx Export |
| DS1296 | High | Web Services: requesting both CFs and specific columns for transactions does not include CFs |
| DS1300 | High | LogLoader: trim white space around user names |
| DS1317 | High | Database: remove a couple of ON DELETE CASCADE on ds_dataset and tutor_transaction |
| DS1319 | High | Web Services: update user agreement to include public web applications as a restricted use |
| DS1326 | High | Step Rollup: selecting a secondary model causes number of rows to almost double |
| DS1298 | Medium | Help: oops message when login expired and dataset id specified in url |
| DS1304 | Medium | KC Sets: KCSet name displays in content header on transaction export page |
| DS1327 | Medium | KC Model Import: if name is greater than 50 characters, ugly exception and user left bewildered |
